

UVA Packaging

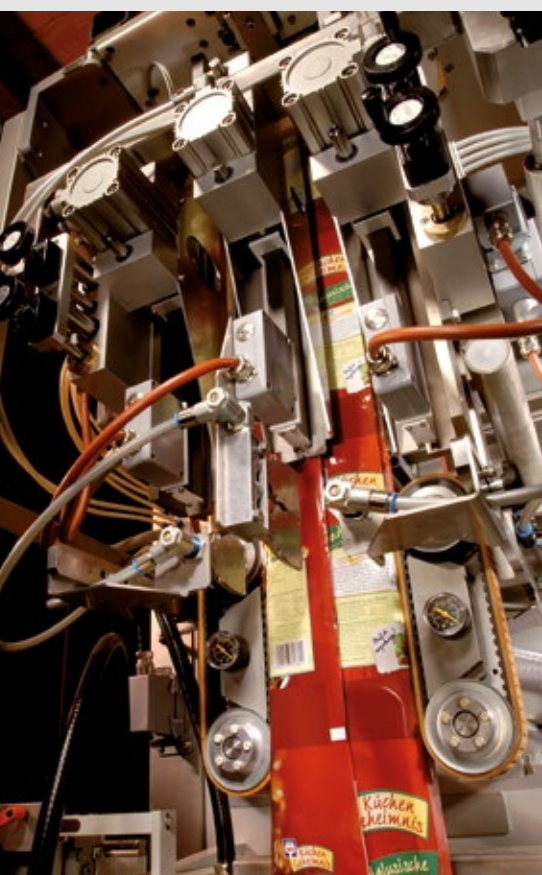

Strength through cooperation

UVA Packaging

A MACHINE IS NEVER JUST A MACHINE. NOT AT UVA PACKAGING. AT UVA PACKAGING, EVERY PACKAGING MACHINE IS BUILT AS A CAREFULLY CONSIDERED SOLUTION FOR A SPECIFIC NEED. A CUSTOM SOLUTION FOR YOUR PROCESS, THUS, IN WHICH FLEXIBILITY AND RELIABILITY ARE THE KEY WORDS.

Every solution begins with a thorough analysis. In this first stage of the development process you profit from more than 60 years of packaging experience. UVA Packaging knows better than anyone else that the packaging of fresh vegetables places different requirements on the process than the packaging of chocolate or potato chips. We combine this experience with innovative strength and a customer-oriented mentality.

THE ENTIRE COLLABORATION: FROM ANALYSIS TO AFTER-SALES SUPPORT

The quality of your production process is what counts. And our machines form a vital part of it. Therefore we leave nothing to chance as we work together towards the ideal solution. The analysis, the brainstorming for potential solutions, the engineering – which also includes the electrical systems and software – and the construction of the machine are all done by our own people. People with access to the sum total of our knowledge and experience. For whom innovative, solution-oriented thinking is second nature.

HIGH-QUALITY ENGINEERING

UVA Packaging offers standard solutions that have been developed on the basis of an excellent understanding of the requirements in your market segment. And naturally the machines can be further refined to meet your specific wishes: we call that 'engineering to order'. The engineering department consists of highly trained mechanical and electrical engineers and software developers who combine their knowledge and skills to independently develop new innovations for the market. For instance, UVA Packaging develops countless innovations that contribute to the improvement of efficiency and flexibility of the packaging line. In most cases these innovations can also be added to the 'installed base'. This retrofit concept is unique in the market.

SERVICE AVAILABLE 24/7

UVA Packaging is your partner when it comes to the reliability and the performance of your production process. A service contract, which also includes scheduled maintenance, is an attractive option. Certainly when you combine this with the use of original spare parts. This is the best way to prevent malfunctions from happening in the first place. Should you nevertheless have a problem with your machine, you have the assurance that our service engineers are available day and night, seven days a week.

PACK-O-NOMICS

For a long time now, packaging has been a success factor for every company. But UVA Packaging does more than just produce packaging machines. With our Pack-O-Nomics concept, you can collect management information that indicates where improvements are possible in the packaging process. This enables you to improve the profitability of your business. Pack-O-Nomics (economics behind packaging) is a unique management information system developed by UVA Packaging.

UVA PACKAGING IN SHORT

- Efficiency
- Flexibility
- Service available 24/7
- Custom-made
- Pack-O-Nomics
- Everything in-house

VDL Groep

UVA Packaging is part of VDL Groep, an international industrial family-owned company with 95 operating companies, spread over 20 countries and with more than 16,000 employees. It is a conglomerate of flexible, independent companies, each with its own specialty. The strength of VDL Groep lies in the mutual cooperation between the companies.

UVA Packaging operates in the finished products division. This division comprises suspension systems for the automotive industry, heating, cooling and air-technical systems, systems for the oil, production automation systems, gas and petrochemical industry, systems for the agricultural sector, sunbeds, roof boxes, container handling equipment, waste collection systems, cigar-making and packaging machines, components for bulkhandling and dust extraction installations and systems for explosion and fire protection.

The other divisions are subcontracting, car assembly and buses & coaches. In subcontracting, VDL specialises in metalworking, mechatronic systems and system supply, plastics processing and surface treatment. The car assembly division includes the production of passenger cars for third parties. The bus & coach division includes chassis & chassis modules, coaches, public transport buses, mini & midi buses, special projects and second-hand buses.
